

Course- BTech
Course Code- CSET101

Year- 2023
Date-

Type- Core
Course Name- Computational Thinking and Programming
Semester- odd
Batch- ALL

Tutorial Assignment: 8

Q1. Write a python program to find out all permutation of given string. Take input without any space.

Q2. What is the output of given code-

```
def fun(**kwargs):  
    for key, value in kwargs.items():  
        print("%s == %s" % (key, value))  
    fun(a='bennett', b='university', c='greater noida')
```

Q3. Write a program to convert the given string into integer ie implement atoi() function. Atoi() takes argument as a string (which represents integer) and return its corresponding value.

Q4. What will be the output of the following code.

```
string1 = "python"  
list_string = ["computer", "python", "prog"]  
  
print(list_string [1] == string1)  
print(list_string [1] is string1)
```

Q5. Predict the output of the following code:

```
string1 = "welcome tothe thetothe World of the Python the"  
substring1 = "the"  
print(string1.count(substring1, 15))
```

Q6. Predict the output of the following code:

```
string1 = 'Python'  
print (string1[:2] + ' Programming')
```

Q7. What will be the output of the following code?

```

string1 = 'Python'
string2 = 'Prog'
string3=2 * (string1 + string2)
print(string3)
if "onPr" in string3:
    print("Python is cool")
else:
    print("Python is tough")

```

Q8. Find out the error in the following code

```

def display(*param):
    for i in param:
        print(i)

display(name="Aarav", age="15")

```

Q9. Find out the error in the following code:

```

def fn(x):
    temp=100
    return x + temp

fn(500)
print(temp)

```

Q10. What will be the output of the following code?

```

string1 = "time waits for noone";
print (string1.capitalize())
print (string1.title())
def my_function(x):
    return x[::-1]
string2 = my_function(string1)
print(string2)

```

Q11. What will be the output of the following code? If there is any error, identify it.

```

string1="Bennett"
print(string1)
string2=ord(string1)
print(string2)

```

Q12. What will be the output of the following code?

```
def fn(name = "Dravid"):
    print("My favourite cricketer is " + name)
fn("Sachin")
fn()
fn("Sehwag")
```

Q13. Predict the output of the following code.

```
def my_function(list1):
    for i in list1:
        print(i)
colors = [("red", '1'), ("green", '2'), ("orange", '3')]
my_function(colors)
```

Q14. Predict the output of the following code:

```
string1 = 'pyython'
print(string1[::-1][::-5])
print(string1[::5])
print(string1[0] + string1[-1])
print(string1[::-1][-1] + string1[len(string1)-1])
print(string1[::5])
```

Q15. Predict the outcome of the following:

(A)

```
name = 'Nina'
pi = 3.14
food = 'pie'
message = (
    f"Hello, my name is {name}. "
    f"I can calculate pi to two places: {pi:4.3}. "
    f"But I would rather be eating {food}."
)
```

(B)

```
str1 = 'A8238i823acdeOUEI'
print(any(c.islower() for c in str1))
```

Q16. Predict the outcome of the following:

```
def vowel(text):
    vowels = "aeiuoAEIOU"
    print(len([letter for letter in text if letter in vowels
]))
    print([letter for letter in text if letter in vowels])

vowel('Welcome India')
```

Q17. Predict the outcome of following:

```
n = 10
row = "*"
while n > 0:
    print(" " * n + row)
    row += "***"
    n -= 1
```

BONUS QUESTION

Q. Write a program in Python to Count Uppercase, Lowercase, special character and numeric values in a string.
